BUILDING AN ANONYMOUS FIP SCANNER USING PYTHON.

Aim:

To develop a python based anonymous FIP scanner using built in ftplib module and determine whether an FTP server permits anonymous access.

Procedure:

1. Install python and import FTP and all-errors classes from python ftplib module.
2. Define anonymous_ftp_scan() to perform FTP scan.
3. Enter authorized FTP server address and establish a connection to FTP using server port
4. Display FTP server welcome message.
5. Attempt anonymous login. If login success display message anonymous access permitted.
6. Use nlst() to check whether the directory contents are accessible.
7. Display available directories, handles login or connection error using exception handling.
8. Close FTP connection after completing scan.

Result:

Thus, an anonymous FTP scanner was successfully implemented using ftplib module.

Output:

ANONYMOUS FTP SCANNER

Target: 127.0.0.1

Port: 21

[1] Connecting to FTP server....

[+] FTP server is reacheable

[+] server response: 220 FTP server ready

[2] Testing anonymous login....

[+] Anonymous login success

[3] The FTP server permits anonymous access

[3] Checking accessible directory

[+] directory listing is available:

welcome.txt

readme.txt
