REVERSE SHELL USING TCP SOCKET.

Aim:

To develop a TCP socket based client server program for communication between two systems.

Procedure:

1. Import socket module.
2. Create a TCP socket using sock_stream.
3. Bind the server to 127.0.0.1 and port 5000.
4. Start the server and wait for client connection.
5. Connect the client to server.
6. Send and recieve messages using send() and recv().
7. Terminate the connection using exit.

Result:

Thus, a TCP Socket based client-server communication program was successfully executed on localhost.

server.py - C:\Users\Admin\Desktop\exp8\server.py (3.12.10)

File Edit Format Run Options Window Help

```
import socket

SERVER_IP = "127.0.0.1"
PORT = 5000

server = socket.socket(socket.AF_INET, socket.SOCK_STREAM)
server.bind((SERVER_IP, PORT))
server.listen(1)

print("Waiting for client...")
conn, addr = server.accept()
print("Connected:", addr)

while True:
    message = conn.recv(1024).decode()

    if not message or message.lower() == "exit":
        break

    print("Client:", message)
    response = input("Enter response: ")
    conn.send(response.encode())

conn.close()
server.close)
```
