EXP.NO: 14
Date:

Capture and analyze network traffic using wireshark.

Aim:

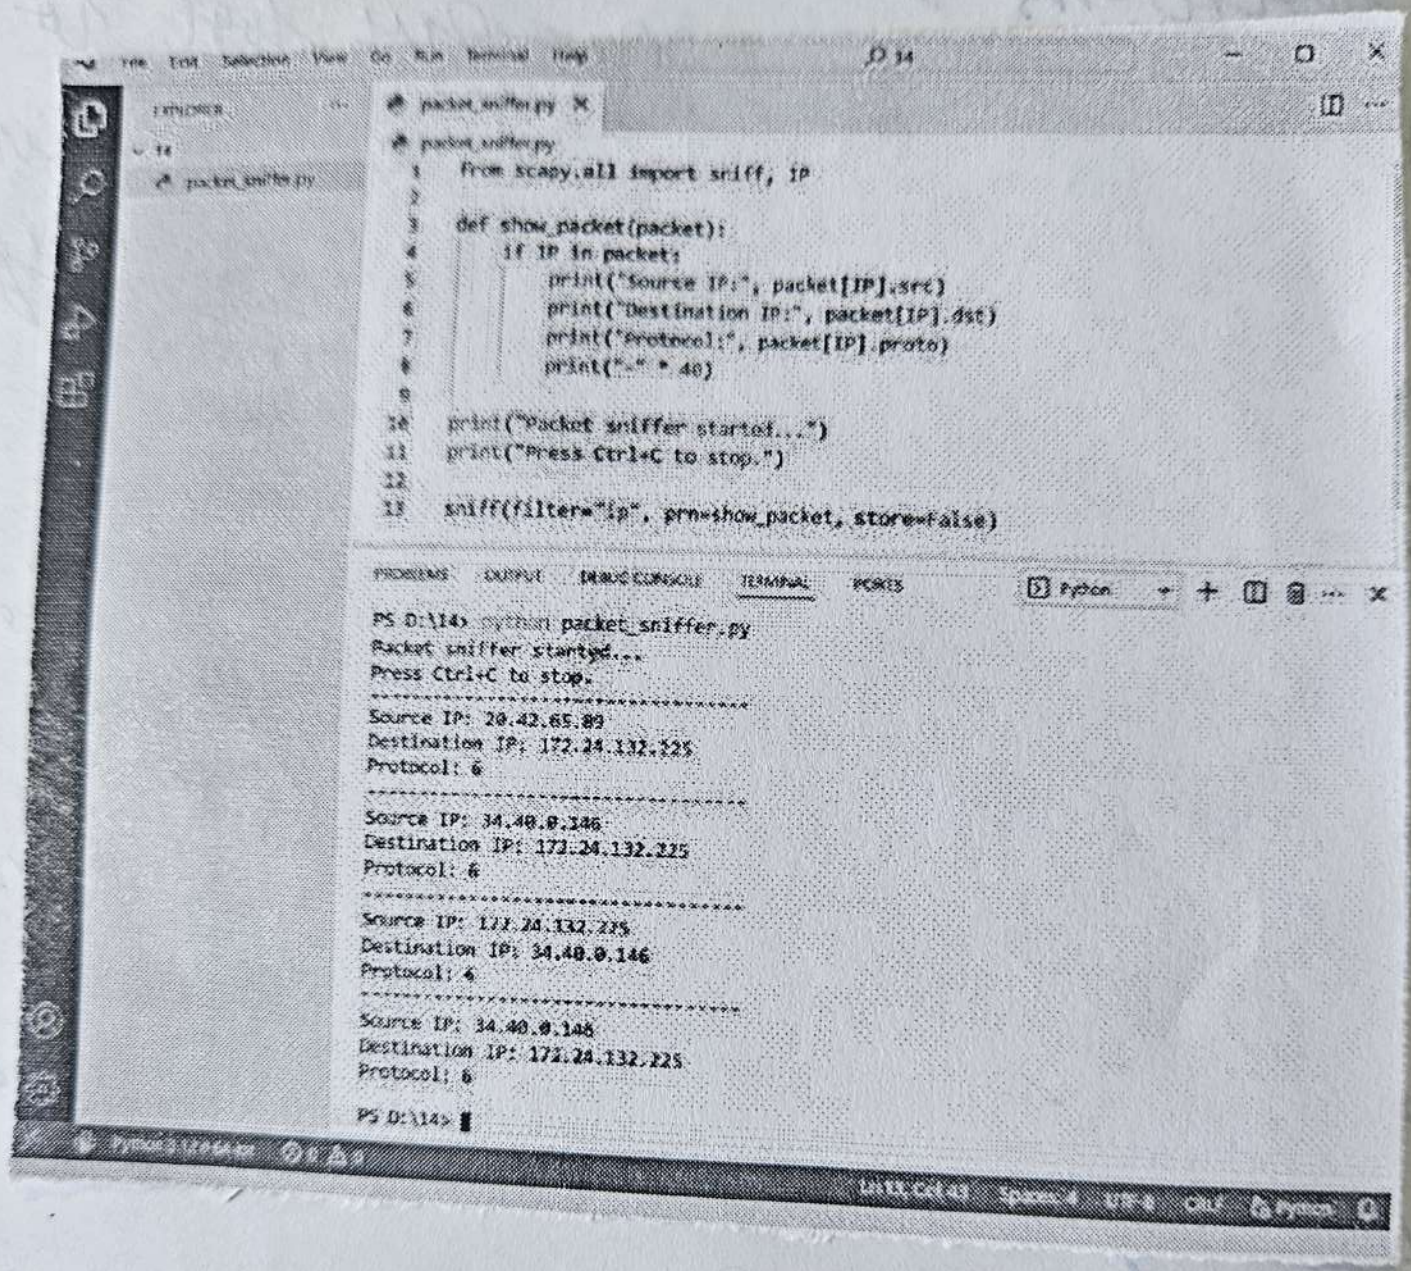

To capture and analyze network traffic using wireshark and identify the proctols and communication b/w devices.

Procedure:

1. Open wireshark on computer
2. Select the network interface to capture traffic
3. Click start capture to begin rating packets.
4. Generate network traffic by browsing networks or using ping command.
5. Observed the captured packets in the wirkshark window.
6. Select a packet to examine its protocol details and packet contents.
7. Stop the capture and save captured traffic files if required.

Result:

Thus, network traffic was captured and analyzed successfully using wire shark and packets and their corresponding network protocol were identified.

packet_sniffer.py
from scapy.all import sniff, IP
def show_packet(packet):
if IP in packet:
print("Source IP:", packet[IP].src)
print("Destination IP:", packet[IP].dst)
print("Protocol:", packet[IP].proto)
print("-" * 40)
print("Packet sniffer started...")
print("Press Ctrl+C to stop.")
sniff(filter="ip", prn=show_packet, store=False)
PS D:\14> python packet_sniffer.py
Packet sniffer started...
Press Ctrl+C to stop.
